DETAILED ACTION

Allowable Subject Matter

Claims 22-55 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art taken either singularity or in combination fails to anticipate or fairly suggest the limitations of the independent claim, in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented in independent claims 22, 23, 25, 26, 28, 29, 31, 32, 35, 36, 37, 40-43, 46, 47, 49, 50, 52, 53, with the important feature being at least one spring element and the at least one connecting member acting to compensate the weight force to mitigate creeping associated with the glued connection(claims 22); the optical element is held on the housing part of the objective by the at least one spring element on the side averted from the direction of the weight force(claim 23); the spring element is biased, the bias corresponding at least approximately to the dead weight of the optical element(claim 25); two spring are provided that are respectively connected tangentially at their end points to the optical element(claim 26); central spring element is provided that is connected to a connecting element on which fastening elements that act tangentially on the optical element are arranged(claim 28); the at least one spring element comprises a pneumatic spring element that is connected to the optical

Art Unit: 2873

element(claim 29); the at least one spring element can be adjusted via at least one control element(claim 31); number of spring elements are arranged such that an action line of the resulting force runs through a centroid of the optical element(claim 32); . connecting members arranged peripherally of the optical element(claim 35); connecting members arranged circumference of the optical element(claim 36, 37); at least one holding element comprises a pneumatic spring element that is connected to the optical element(claim 40); the at least one holding element is arranged on the optical element in a fashion perpendicular to an optical axis of the optical element(claim 41); the objective ,the holding element exerting an approximately constant force on the optical element notwithstanding small deflections of the optical element(claim 42); wherein the optical element is held on the housing part of the objective by the at least one holding element on the side averted from the direction of the weight force(claim 43); the mount axis of the optical element being inclined at an angle to the direction of the weight force of the optical element(claim 46); wherein the at least one holding element comprises two spring elements that are respectively connected tangentially at their end points to the optical element(claim 47); at least one holding element comprises two spring elements that are respectively connected tangentially at their end points to the optical element(claim 49); the at least one holding element comprising at least one spring element whose spring force produces essentially no change in position of the optical element during creeping of the optical element, the at least one spring element comprising a pneumatic spring element that is connected to the optical element(claim 50); at least one holding element via which the optical element is held on a housing part

of the objective, and wherein the force exerted on the optical element by the holding element(claim 52);at least one holding element via which the optical element is held on a housing part of the objective(claim 53). Therefore claims 22-55 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
